Set Theory

Autumn Semester, 2021

Graphs and

Relations

Outline

- Locating and open python notebooks on colab
- Completing your work
- Downloading your work from colab and uploading to Moodle

Course Locations

The image displays four screenshots of online platforms used for course delivery:

- Moodle:** A screenshot of the Moodle interface for the "Discrete Mathematics-17080-[2021-2022]" module. It shows sections for "Module Introduction", "Logic", "Methods of Mathematical Proof", "Sets", and "Relations and Functions".
- GitHub:** A screenshot of the GitHub interface for the "discretemathematics-202122" repository, showing files like "Module Introduction", "Logic", "Methods of Mathematical Proof", "Sets", and "Relations and Functions".
- Slack:** A screenshot of the Slack interface showing a conversation between users "Denis Flynn" and "kmurphy". Denis has posted a welcome message and a picture of himself.
- Colab:** A screenshot of the Google Colab interface for a practical titled "Practical 00 - Introduction to Python and Colab". It shows code cells and a table of contents for the practical.

- Main entry point.
- Uploading of assignments.
- Online quizzes.

- All static content
- Links to python notebooks
- External resources

- Instant messaging (timetable changes etc)
- Public and one-to-one questions

- View, edit and run python notebooks.

Outline

1. Locating and Opening Notebooks

3

- Notebooks are listed on the Moodle main page and within topics on the Github website.
- Clicking on Colab opens notebook in Colab.
- Need a separate Google account to use colab.
- Need to login and click on authorship warning before editing.

2. Edit and Working with Notebooks

7

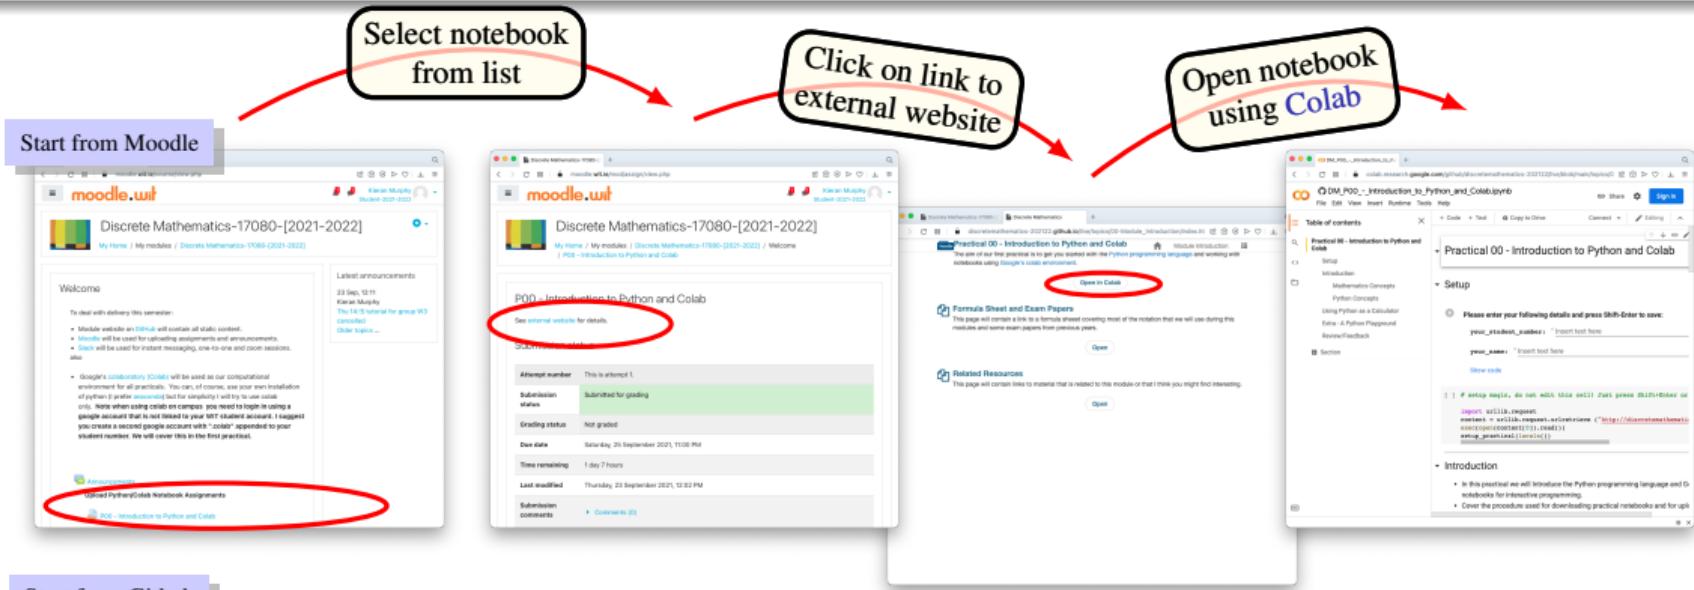

- A notebook is a list of cells which are either:
 - text** — contain markdown text, where markdown is a simple but effective technique to typeset content
 - code** — which contain python code to run.
- The Colab interface has many features to help with editing notebooks, so it is worth spending some time just playing with it.

3. Downloading and Submitting Notebooks to Moodle

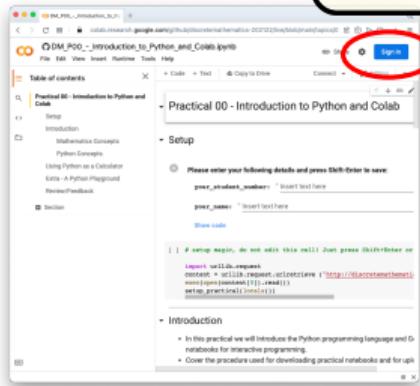

10

- Colab automatically saves your notebook as you work, but you need to submit it to Moodle for grading.
- Download python ipynb using the Colab menu option
- Notebook should be saved to your Download folder.
- Open Moodle and upload file.

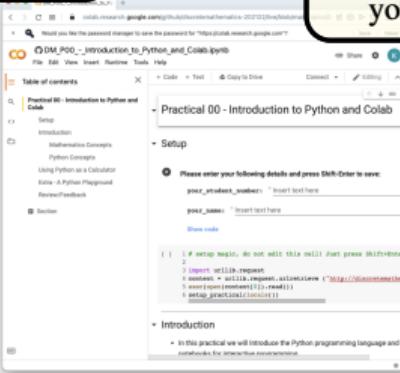

Step 1 — Locating and Opening Notebooks

Step 2 — Login Before You Start Editing ...

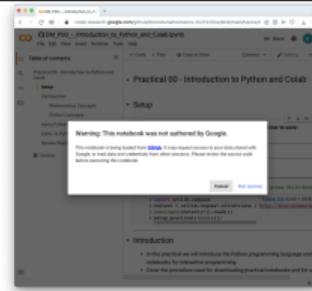

- Login before editing.
- Use a **different Google account** from your WIT linked student account.
- Use only one Google account[†] with Colab.

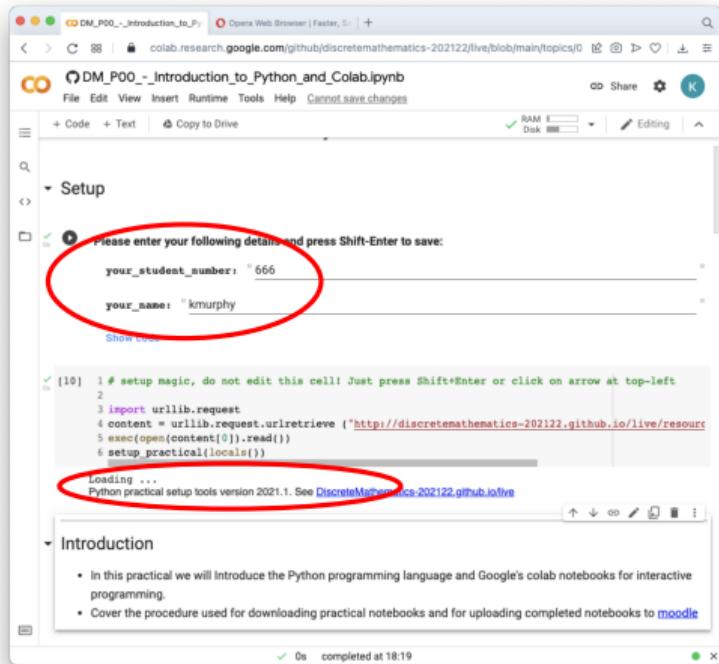

When you run a cell you will get a 'This notebook was not authored by Google.' warning:

- To edit (the just opened) notebook click on **Run Anyway**.
- To continue editing from a previous session, click **Cancel**, then select menu **File → Open notebook**, then select your notebook from **Recent** list.

[†]Switching between Google accounts is a pain. To avoid this I use a separate browser for Colab work. The **Opera** browser is a good option.

Step 3 — Enter Details and Run Practical Setup...

Please enter your following details and press Shift+Enter to save:

```
your_student_number: 666
your_name: kmurphy
```

[10]

```
1 # setup magic, do not edit this cell! Just press Shift+Enter or click on arrow at top-left
2
3 import urllib.request
4 content = urllib.request.urlretrieve ("http://discretemathematics-202122.github.io/live/resource")
5 exec(open(content[0]).read())
6 setup_practical(locals())

```

Loading ...
Python practical setup tools version 2021.1. See [DiscreteMathematics-202122.github.io/live](#)

0s completed at 18:19

- In the first cell, enter your student number and name and execute the cell.
- Execute the second cell to complete the setup. You should see message:
“Python practical setup tools ...”,
The version number is currently 2021.1, but this will change.

Outline

1. Locating and Opening Notebooks

3

- Notebooks are listed on the Moodle main page and within topics on the Github website.
- Clicking on Colab opens notebook in Colab.
- Need a separate Google account to use colab.
- Need to login and click on authorship warning before editing.

2. Edit and Working with Notebooks

7

- A notebook is a list of cells which are either:
 - text** — contain markdown text, where markdown is a simple but effective technique to typeset content
 - code** — which contain python code to run.
- The Colab interface has many features to help with editing notebooks, so it is worth spending some time just playing with it.

3. Downloading and Submitting Notebooks to Moodle

10

- Colab automatically saves your notebook as you work, but you need to submit it to Moodle for grading.
- Download python ipynb using the Colab menu option
- Notebook should be saved to your Download folder.
- Open Moodle and upload file.

Edit and Working with Notebooks

Toolbar to show/hide table of contents, find/replace, code snippets, and files.

The screenshot shows a Jupyter Notebook interface with several features highlighted:

- Left sidebar:** A toolbar with icons for file operations (New, Open, Save, etc.), search, and code/text conversion. A red box highlights the arrow icon used for collapsing sections.
- Top right:** A toolbar with Share, Settings (highlighted with a red box), and Help.
- Cell controls:** A toolbar at the top of each cell with buttons for running, deleting, and cell manipulation (highlighted with a red box).
- Code cell content:** A cell containing Python code and explanatory text about arithmetic operations and standard rules.
- Text cell content:** A cell containing text and a bulleted list of notes.
- Bottom cell controls:** Buttons for running the current cell (highlighted with a red box) and inserting new cells.

Click on the arrow to hide/show section. (This is called code folding.) When hidden see note for number of hidden cells.

Click on the [] or ⏪ to run the current cell.

Click to access setting including hide/show line numbers

Click to hide/show menu & ribbon

This toolbar appears when editing a cell. Buttons move cell up / down, delete etc.

When editing a text cell, the cells splits into two — the left is the source (in markdown) and the right is the generated output.

Move mouse pointer to centre of top or bottom edge of cell to insert a code (or text) cell in that location.

Review / Feedback

One of disadvantage of going online is that students can lose out on opportunities to provide feedback on how they think the semester is progressing and in particular for **Discrete Mathematics**, how they easy/difficult, interesting/boring, useful/confusing they find the material. By completing the following you will help us improve our delivery.

Please enter your feedback and click on arrow at top-left to save.

This practical

How difficult did you find this practical?

`practical_difficulty:` Some bits were hard but overall it was doable

Including online session time, how long (in minutes) did it take for you to finish this practical?

`practical_duration:` 30

This week's material

How difficult did you find each of the following this week (0=too easy 3=easy, 5=just right, 7=a bit difficult, 10=impossible)?

`lecture_difficulty:` 5

`tutorial_questions_difficulty:` 5

Use the line below to enter any comments – what you liked, what you did not like. Again all feedback is welcome.

At the end of each notebook, we have a short questionnaire which we would like you to complete so that we can have a better idea as to how you are fairing. Everything entered here will be taken in the strictest confidence and we will do our best to address any issues.

We are interested in:

- Difficulty of material — are we assuming too much prior knowledge? do we need to give me examples? etc.
- The length of time you spend on the Discrete Mathematics activities — both spending too little and spending too much time on an activity is common.
- Is there anything that we should start/stop doing?

Outline

1. Locating and Opening Notebooks

3

- Notebooks are listed on the Moodle main page and within topics on the Github website.
- Clicking on Colab opens notebook in Colab.
- Need a separate Google account to use colab.
- Need to login and click on authorship warning before editing.

2. Edit and Working with Notebooks

7

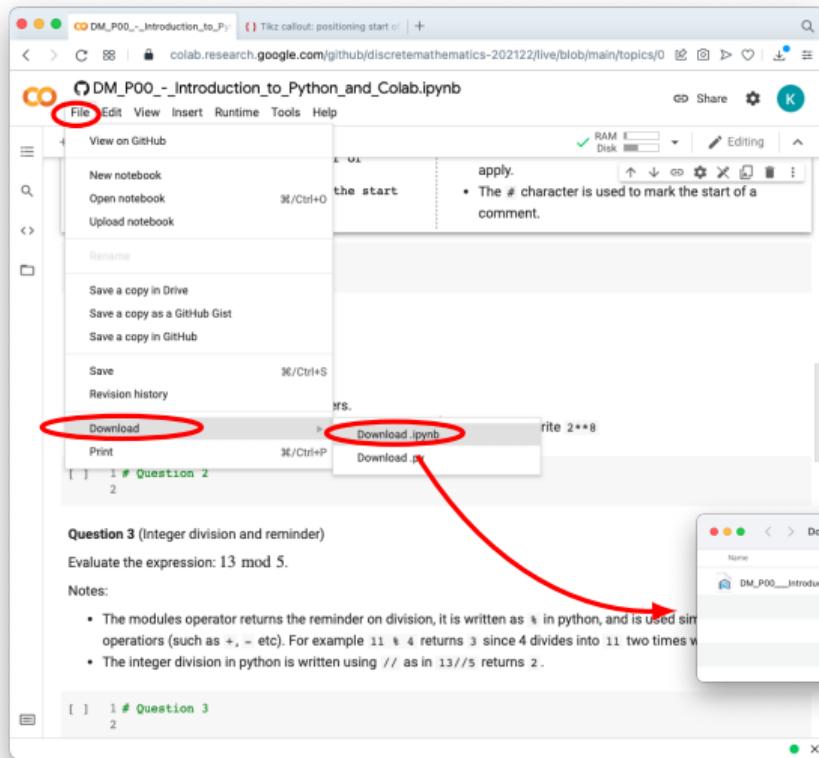

- A notebook is a list of cells which are either:
 - text** — contain markdown text, where markdown is a simple but effective technique to typeset content
 - code** — which contain python code to run.
- The Colab interface has many features to help with editing notebooks, so it is worth spending some time just playing with it.

3. Downloading and Submitting Notebooks to Moodle

10

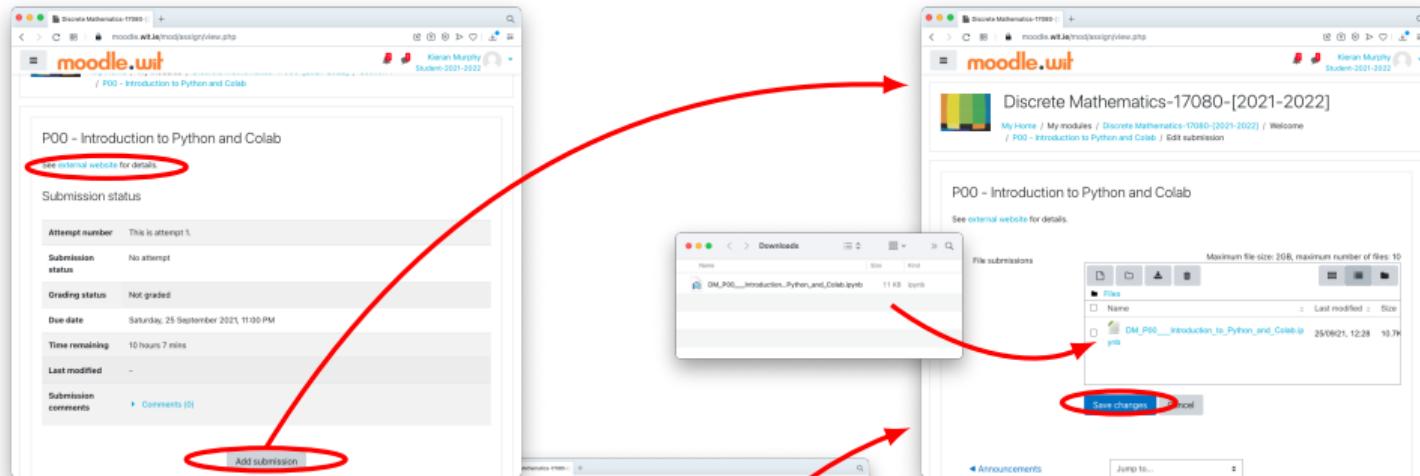

- Colab automatically saves your notebook as you work, but you need to submit it to Moodle for grading.
- Download python ipynb using the Colab menu option
- Notebook should be saved to your Download folder.
- Open Moodle and upload file.

Download Notebook as a ipynb

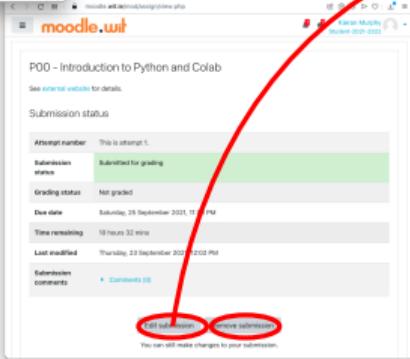

- From the Colab menu select File → Download → Download ipynb.
- This should store a copy of your notebook in your Downloads folder.
- This file is a text encoded file with extension ipynb
- You need to upload this file to Moodle for grading.

Uploading and Submission to Moodle

Or, if you have submitted a notebook already ...
Remove first submission, and then upload a new notebook using Edit

Make sure you have a single notebook in submission box before selecting Save
